

Table of Contents - Mathematics

- **Section 1: Linear Algebra**
 - Matrices and basic operations
 - * Definitions of a matrix
 - * Special matrices
 - * Addition, subtraction and scalar multiplication
 - * Matrix multiplication
 - Determinants
 - * Definition of determinant
 - * Sarrus' rule (for 3x3 matrices)
 - * Laplace expansion
 - * Elementary operations method (Gaussian elimination)
 - Matrix inversion
 - * Adjugate (cofactor) method (by formula)
 - * Gauss–Jordan method
 - Systems of linear equations
 - * Cramer's rule
 - * Gaussian elimination method
 - * Inverse matrix method
- **Section 2: Analytic Geometry**
 - Vectors
 - * Cartesian space
 - * Definition of a vector
 - * Addition, subtraction and scalar multiplication
 - * Dot product and cross product
 - * Applications in computer science (CS) and physics
 - Lines
 - * General and slope-intercept equations of a line
 - * Parametric equation of a line
 - * Equation of a line through two points
 - * Relative positions of lines (parallelism, perpendicularity)
 - Planes
 - * General and normal equation of a plane
 - * Parametric equation of a plane
 - * Equation of a plane through three points
 - * Relative positions of planes
 - Line and plane in space
- **Section 3: Differential and Integral Calculus**
 - Functions
 - * Definition of relations and functions
 - * Real functions ($\mathbb{R} \rightarrow \mathbb{R}$)
 - * Sequences as functions ($\mathbb{N} \rightarrow \mathbb{R}$)
 - * Other examples of functions (e.g. determinant $M \rightarrow \mathbb{R}$)
 - Limits
 - * Limits of sequences
 - * Limits of functions
 - * Basic theorems about limits
 - Derivatives
 - * Definition of derivative and geometric interpretation
 - * Basic formulas and differentiation rules
 - * Higher order derivatives

- * Applications of derivatives (e.g. extrema, function analysis)
- Integrals
 - * Indefinite integral and antiderivative
 - * Definite integral and its geometric interpretation
 - * Basic integration methods (integration by parts, substitution)
 - * Applications of integrals (area, volume, arc length)
- Differential equations
 - * Basic concepts and classification
 - * First-order differential equations (separable, linear)
 - * Second-order differential equations with constant coefficients
 - * Applications in physics and engineering
